

CLAIM AMENDMENTS

1 30. (currently amended) A toaster comprising:
2 a housing having an upper load opening and a lower
3 discharge opening;
4 partitions walls in the housing defining underneath the
5 load opening ~~outer walls of~~ defining an internal cooking chamber
6 adapted to hold an object to be toasted and ~~inner walls of~~ also
7 defining with outside walls of the housing outside the chamber a
8 passage extending between the openings, around the cooking chamber,
9 and along inside surfaces of the outside walls of the housing to
10 both sides of the cooking chamber;
11 heat-radiating elements in the cooking chamber positioned
12 to radiantly heat and toast the object therein; and
13 cooling means including a fan in the housing below the
14 cooking chamber for drawing outside air into the housing through
15 the load opening, passing it downward through the passage around
16 the cooking chamber, and expelling it from the housing via the
17 discharge opening such that the air passing through the passage
18 cools the outside walls of the housing.

1 31. (previously presented) The toaster defined in claim
2 30 wherein the cooling means also draws air from the cooking
3 chamber, mixes it with the air moving along the passage, and expels
4 the mixed air through the discharge opening.

5 32. The toaster defined in claim 30 wherein the
6 partitions walls segregate the air drawn from the cooking chamber
7 from the air drawn in through the load opening.

1 33. (previously presented) The toaster defined in claim
2 32 wherein the cooling means mixes air from the cooking chamber and
3 from the passages below the cooking chamber.

1 34. (previously presented) The toaster defined in claim
2 30 wherein the radiating elements have a heat capacity that
3 decreased downward.

1 35. (previously presented) The toaster defined in claim
2 30, further comprising
3 means including a door for upwardly closing the cooking
4 chamber.

1 36. (previously presented) The toaster defined in claim
2 30 wherein the fan is a variable-speed fan.

1 37. (previously presented) The toaster defined in claim
2 30 wherein the housing includes a crumb-collection tray defining a
3 bottom wall of the cooking chamber.

1 38. (previously presented) The toaster defined in claim
2 30, further comprising
3 a warming tray fixed on the housing immediately above the
4 discharge opening.

1 39. (previously presented) The toaster defined in claim
2 30 wherein an upper region of the housing defining the load
3 opening, cooking chamber, and passage is of metal, and a lower
4 region of the housing holding the fan and defining the discharge
5 opening is of plastic.

1 40. (currently amended) A toaster comprising:
2 a housing having a metallic upper portion defining an
3 upper load opening and side walls and a base carrying the upper
4 portion and defining a lower discharge opening;
5 partitions walls in the upper portion defining therein
6 an internal cooking chamber adapted to hold an object to be
7 toasted, and forming a passage extending between the load and
8 discharge openings, around the cooking chamber, and along inside
9 surfaces of the side walls of the upper portion of the housing;
10 heat-radiating elements in the cooking chamber positioned
11 to radiantly heat and toast the object therein; and
12 cooling means including a fan in the base below the
13 cooking chamber for drawing outside air into the housing through
14 the load opening and for passing it downward through the passage
15 around the cooking chamber, for drawing air downward from the

16 cooking chamber and mixing it in the base with the air from the
17 passage, and for expelling the mixed air from the housing via the
18 discharge opening.
